INTRODUCTION

Bring Out The Best Of Your Smile!

A shy smile hides your true self from the world. Problems with your teeth, gums and jaw create a barrier between you and your friends and family. If you're self-conscious about discoloured, mishappen or crooked teeth you may find yourself reigning in your smile or hiding it behind your hand. A smile makeover starts with a treatment plan tailored to your personal goals.

You tell us what areas you'd like to improve and we'll show you what treatment options and procedures are available. Feel confident you're in safe hands. We know how important it is for your treatment to be as quick and painless as possible-- we care about your overall health. That's why we have invested in the latest dental technology to ensure a swift diagnosis and a quick and accurate treatment which will have you back on your feet in no time.

Dr. Ameen Al-Obaidi and Dr. Istabraq Jasim

GINGIVAL GRAFT

The Gingival (Gum) Graft Procedure

The gingival (gum) graft procedure is highly predictable, and results in a stable, healthy band of attached tissue around your tooth.

In health, a tooth is surrounded by two types of tissue. The first is gingiva (gum), which is pink in color and thick and dense under a microscope. Gingiva forms a tight seal around the tooth, which serves as a barrier against penetration of bacteria to your underlying supporting bone. The gingiva also helps to withstand trauma from brushing, eating, etc.

The other type of tissue is mucosa. It is red, thin and appears loose under a microscope.

It does not seal tightly around the tooth, or withstand trauma well (as shown by how easily you can “scrape” the floor of the mouth).

No matter how meticulously you try to control the bacteria when the gum has been lost, there is a greater chance of bacteria affecting the supporting bone around your teeth.

Gum recession also results in root sensitivity to hot and cold foods, and an unsightly appearance.

A gingival gum graft solves these problems.

When gum recession occurs, the body loses a natural defense against both bacterial penetration and trauma. If recession reaches the mucosa, your first line of defense against bacteria is lost.

Following a gingival graft procedure, the area is healthy and more esthetic. The gingival graft covers the exposed portion of the root, improving both your health and esthetics.

Commonly Asked Questions

How long does a gingival graft procedure take?

The visit to perform a gingival graft is about 60 minutes long. Dissolving stitches are used. One or two 10 minute check-ups are scheduled to ensure the area has healed correctly.

Will the gingival graft procedure hurt?

Only *Lidocaine* is necessary to perform a gingival graft. You will feel nothing once the area has been numbed. When the *Lidocaine* wears off, there may be mild discomfort. Medication will be prescribed to control any discomfort you might experience. This procedure will not cause you to miss work.

What is the cost of a gingival graft?

The cost of a gingival graft will vary with the situation. Your periodontist will discuss this with you before proceeding with any treatment.

How well will the gingival graft procedure work?

A gingival graft procedure is highly predictable. The end result is a healthy, stable band of attached gum tissue, which improves your esthetics and helps to reseal and protect your tooth and underlying bone.

TESTIMONIALS

What Our Patients Have To Say

“Tomken Center Dentistry has been my primary dental care center for over 10 years now. I have recently had a dental emergency and was treated with what I felt to be extreme care and knowledgeable professionalism. I primarily use two dental hygienists at this center for regular cleanings. Both these hygienists clean my teeth in such a manner that I don’t feel uncomfortable during my visit, nor do I feel pain during my cleanings. I also take my now 4 year old son for his regular check-ups at this center and he has regularly said: “I love going to the dentist.”

KENDAL H.

“

The office is clean and welcoming. The front office staff are friendly and efficient. The dental assistants are friendly and competent. Dr.Ameen is very thorough, informative and treats his patients like family.

NATALIE W.

“

My family and I have been going to Tomken Dental for a few years. As I have a slight fear of the dentist, they treat me with the utmost kindness and comfort for each procedure I need. All the staff is wonderful and welcoming.

DEBBI D.

“

Thanks for Dr. Istabraq and all Tomken Dental team for the great costumer service and professional work that they did for my teeth #bestdental in Mississauga.

AHMED D.

MEET YOUR DENTIST

Dr. Ameen

Dr. Ameen graduated from Baghdad University in 1997 with a Bachelor degree in Dental Surgery. He finished a post graduate diploma in dental surgery MFDS from Glasgow in 2010. He was interested in implant surgery and cosmetic dentistry, therefore, he finished his fellowship and continued his clinical and theoretical research, finishing his diploma, in placing and restoring implants. In a nutshell, this prestigious diploma means that he has completed a ton of implants with a very high success rate, and has put in countless hours of continuing education to perfect his craft. Dr. Ameen is happy to be a part of his patient's esthetic journey by helping them restore smiles. He finished his DDS in Canada after passing the NDEB exam in Western Ontario.

Dr. Ameen has had a privilege of working in four continents, which has enabled him to connect and develop great communication skills with patients from all walks of life. He is the owner of four practices; Hamilton (Barton Dental Centre), Mississauga (Tomken Centre Dentistry), Thunder Bay (Redwood Dental Centre), and now recently Thunder Bay (Sky Dental Centre).
